

Doc Cam Hack Reminder Sheet

Useful Applications

- Use the Doc Cam real time with your students while teaching lessons.
- Record your lessons (via Zoom's record or a screen capture tool such as Loom) and upload them to Classroom, Schoology, etc. for your students to view and you discuss later.

System Reminders

- *You can use Zoom or Google Meet to do this – just make sure you can log into whichever platform you choose on both your computer and your phone (or an iPad/tablet works too!).*
- Ensure Zoom (or Google Meet) is downloaded on both your computer and your phone.

Setting Up the Doc Cam

The same steps can be used for Google Meet; the difference will be in finding the login information.

1. Log into Zoom on your computer first.
2. Mute your computer's Zoom microphone AND your computer's sound.

3. Find the Meeting ID (and password, if applicable) by pressing the ⓘ in the upper left corner of your Zoom screen.

- Log into Zoom on your phone (or iPad/tablet) using the same Meeting ID and password from step 3. (You can be signed into the same Zoom account on your phone as you are in on your computer).
- Choose “Call Using Internet Audio.” (Picture at right shows command prompt for an iPhone; Android users will have a command prompt above the “Join Audio” button in the lower left hand corner.)

- Mute your phone’s sound.
- Unmute your phone microphone.

*Muting your phone’s sound and your computer’s sound will prevent feedback for when you talk. **You will need to use headphones in your computer or phone in order to hear what your participants are saying if you use the doc cam live. You may have to unmute the audio on that device. Not using headphones may cause feedback – play with it and see what works best for you.***

Muting your computer’s Zoom microphone and unmuting your phone’s zoom microphone will ensure that students who watch in Speaker View will see what you are displaying on your Doc Cam, as this is the input for

where your sound is coming from. To make sure they hear you clearly, you can also use headphones (with a speaker) that you plug into your phone.
